

PART TWO

Cybercrime cost the world almost \$700 billion in 2019.

2019 Data breaches: **4 billion records breached so far.**

Data breaches have run at a record pace in 2019.

While cryptocurrencies are well-known for increased security — mostly thanks to the decentralized nature of their underlying technology — the same cannot be said for crypto exchanges. The biggest and busiest exchanges are still very much centralized, and as such, they are often targeted by hackers.

Twelve major cryptocurrency exchange hacks occurred in 2019. Of these, 11 hacks resulted in the theft of cryptocurrency while one only involved stolen customer data. In total, \$292,665,886 worth of cryptocurrency and 510,000 user logins were stolen from crypto exchanges in 2019. Cryptocurrency exchanges experienced more hacks last year than in 2018, when only nine cryptocurrency exchanges fell victim to security breaches.

Consider these statistics for the first half of the year:

- 4.1 billion: The number of records exposed.
 - Hackers steal 75 records every second.
- Up until March 2019, more than 14 billion data records had been lost or stolen.
 - Hackers create 300,000 new pieces of malware daily.
- 444,259 ransomware attacks took place worldwide in 2018.

The DigitalVault Encryption Technology is changing the cybersecurity paradigm

The DigitalVault Is Breaking The Rules of the Current Cyber Security Methodology

Encounter the next era in cybersecurity:

The Science of Emptiness

(Computer Science Field that is promoted exclusively by DigitalVault)

Empty data storage systems without encryption keys or backdoors are the ultimate solution to stop forever hacking attacks.

No storage. No Encryption Keys. Nothing to Hack.

The DigitalVault Systems are designed to be:
“Like Breaking into an Empty Bank Vault”

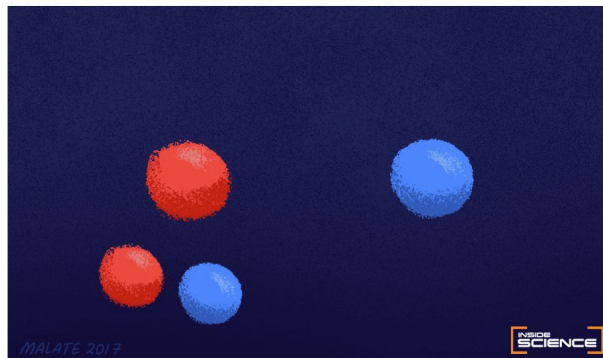

There are two ways to create the ‘**emptiness**’ effect of data storage systems and servers :

Creating systems that do not store, and cannot store anything, so that no data can be extracted from them .

The second option is to create a system which is like a Magicians Box. This means that you create the ‘**Illusion of Emptiness**’ Data is indeed stored within this system, but cannot be seen by intruders.

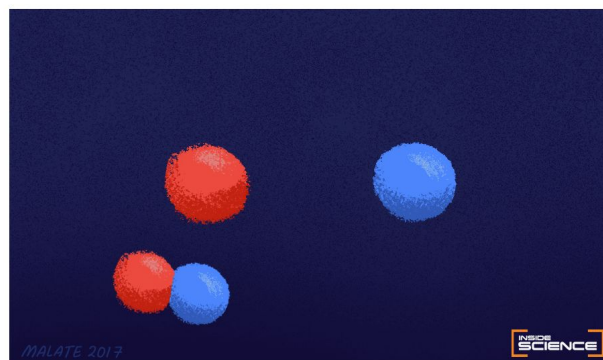

There are multiple ways to create this ***Emptiness Effect***.

Below, we describe one Keyless Encryption method in an “***Empty Storage***” system:

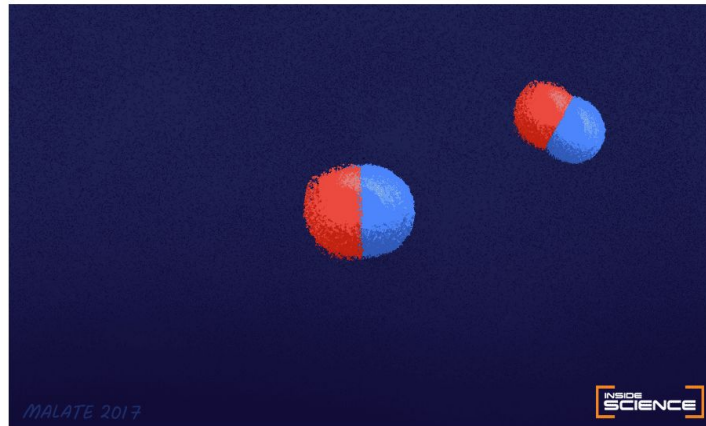

Think of the above dots as 4 files stored within the system. These files are not '*at rest*' like on the conventional storage's memory .

They are constantly moving, circulating at extremely high speeds, and not residing in any fixed location(not stored into a specific folder) .

The files are circulating at extremely high speed, and also encrypt themselves by merging together. (*look at the blue and red dots*)

By “merging” together, two files are self-encrypting themselves without keys. When they divide back into single files, they ‘*decrypt*’ themselves.

Single Files can encrypt themselves too, without encryption keys, by simply diving themselves in multiple parts.

Everything is governed by a combination of algorithms.

The fact that the files are constantly moving so fast, without having a fixed location, (*whilst encrypting and decrypting themselves on a constant basis*) for the attacking hackers, it creates the illusion of a ‘*black hole*’ a system that has no visible files stored , no visible encryption keys.

This technology can be integrated on data servers , on computer network systems and within secure microchips to be installed on all operating systems such as smartphones, computers and wherever an ultra-secure data storage system is needed.

The DigitalVault Technology is based on our

Triple Zero Standards:

ZERO TRUST > ZERO KNOWLEDGE > ZERO STORAGE

Zero Trust: The users of the cybersecurity systems do not have to trust any third party for storing their sensitive data or for securing their communications.

Zero-Knowledge: In case the transmission of data requires the use of third-party services e.g. in the form of servers, the information will be end to end encrypted, and 100% anonymous. This means, the third party will have zero knowledge of the content of the files in transit.

Zero Storage: No Storage, means that in the case of a hacking attack, there is virtually nothing to hack. DigitalVault systems do not store encryption keys anywhere, at anytime.

DigitalVault technology is based on a revolutionary concept in cyber defense: **The Keyless & Undecipherable Encryption**

Private/Public keys pairs are the main target of hacking, the total absence of keys within the system makes the cracking of data virtually impossible, even to future quantum computing.

Zero Storage Standard, covers not only the fact that no encryption keys are ever stored, but also the fact that the entire memory is '**empty**' with no files stored, anywhere. Simply put, if no files are stored, there is nothing to hack.

The **Triple Zero Standard** Cyber Security Technology can be applied to Data Servers, Data/Information centers, Cloud-Based Services, Banking & Financial Industries, Credit Card Companies & Mobile Payment Provider Industries, Aerospace, Defense and Intelligence, Healthcare, Stock Brokerages & Exchanges, Credit Unions, Investment Funds, Accountancy Companies & other financial sectors, etc to prevent data breaches and hostile hacking attacks.

Governments across the world are responding to the global cybersecurity crisis by creating new regulations that govern the way companies handle and store valuable consumer data. This includes important information such as personal identification, banking, and credit card numbers, and purchase history.

Encryption keys are essential for encrypting data and are therefore used by the DigitalVault technology. The main difference however, is that we do not store them on the devices or systems used, nor on servers, actually nowhere.

Key Pairs are created on the spot, for milliseconds, when needed, by our proprietary combination of algorithms, and then wiped out, permanently.

DigitalVault provides **Military-Grade Encryption Solutions** for ultra-secure , anonymous, untraceable, keyless encrypted storage solutions.

DigitalVault provides impenetrable defensive cyber solutions for **Keyless End to End Encrypted Database Storage & Crypto Custody**

Our Keyless Encryption Technology is immune to spyware, malware and hacking softwares.

The Cryptocurrency Storage System is immune to digital forensic data extraction technologies.

Our Companys' Vision and Mission:

Develop constantly new & disruptive cyber defense technologies to solve involving cybersecurity issues covering all business fields. To change the cybersecurity paradigm is our mission whilst creating the next era of cybersecurity. DigitalVault is presenting a disruptive approach to the cyber defense of the Fintech, Healthcare, Energy and additional industries that needs maximum security for their data.

Ultra-secure data storage and advanced encryption devices are at the core of all that we do at DigitalVault.

Individuals and Financial Institutions are now able to store and invest their digital assets and crypto wealth in an ultra-secure and fully insured system, that will guarantee total control, privacy, full anonymity to the account holder while storing wealth more securely than any bank in the World.

The DigitalVault System guarantees secured lifetime access to you and the people you decide to share the account with, including heirs. Users can access their funds at any time, even years later. It doesn't matter if the DigitalVault Crypto Vault device is lost, stolen, seized or missing.

The DigitalVault device is an Encryption Device for Securing the storage of Crypto and requires no technical skill at all. It is Impossible to lose funds due to user error because the crypto wallet is so easy to use, which is less complicated than using an ATM machine.

This is the World's Most Secured & Anonymous Crypto Custody Technology available allowing Ultra Secured Financial Assets Transfer, Transactions and 100% Insured Crypto Banking.

There is a saying in the crypto world: if you don't hold your private key, someone else does.

This has certainly been the case cryptocurrency exchanges, where millions of user funds have been stolen in recent months. And even hardware wallets where the 'wallet' company controls 'safely' the user's private keys, they too have been hacked, again with millions in crypto being stolen.

Our Crypto Custody Solutions are based on the Science of Emptiness: creating the illusion of nothingness to potential hackers.

NO Storage. Nothing To Hack.

We are a cybersecurity company providing digital anonymity, encryption devices and systems for anonymous data and crypto storage, securing total privacy.

DigitalVault is offering Cryptocurrency Storage , Digital Assets Custodial Solutions.

The DigitalVault : The World's Most Secure Crypto Storage Solution
The Only Crypto Custody Solution that does not store any private keys

DigitalVault provides safe and ultra-secure cryptocurrency investing.
DigitalVault is the future of protecting Bitcoin Wealth: Take Full Control of Your Personal Crypto Wealth.

The Digital Crypto Vault allows you anonymous and independent control of your crypto assets.

The DigitalVault Crypto Storage Solution included in the encryption device operates without any private/public keys pairs, therefore, an online or offline hacking attack is almost impossible.

The DigitalVault Technology is Enabling total custody confidentiality of Digital Assets. In the case, the encryption device is lost, stolen or seized, no real and useful information can ever be extracted from the device.

Why? Because data was never stored permanently, in the first place and the system works in the total absence of keys.

Nobody can access your Crypto Funds, at any given time, except you.

**Get Top-Level Security for Your Cryptocurrency Investment Now.
DigitalVault Ultra Secure Crypto Custody**

Ultra Secure Crypto Storage and Communication solutions are at the core of all that we do at DigitalVault.

The DigitalVault is a Cyber Security Company that provides ultra-secure encryption solutions to the Blockchain, Fintech and Communication Industries.

The DigitalVault is not a traditional crypto wallet provider, we supply sophisticated military-grade encryption devices for securing your crypto funds.

Digital Crypto Vault is the only private and fully insured way, to save your Crypto Riches, for immediate use or for the future generations.

We are experts in cryptocurrency inheritance and cooperate with the leading law firms, worldwide.

The DigitalVault offers more privacy than any other form of crypto banking.

All other Crypto storage solutions such as Hardware Wallets, Cold Storage, Software Wallets and Crypto Exchanges have total control over your money and personal details because somehow they may have access to your private keys.

Take Full Control of Your Personal Crypto Wealth with the Safest Crypto Custody Technology

Our Custodial Systems are based on the Triple Zero Standard 000 developed by our laboratories :

Zero Trust - Zero Knowledge - Zero Storage

The Digital Crypto Vault allows you independent control of your crypto assets: You are the only one that controls and can access your crypto funds.

The DigitalVault is not a hardware wallet, it is not a cold storage wallet, it is not an online wallet. This is a new form of ultra secured crypto storage, totally controlled by the user based on a patent-pending technology that requires no private/public keys pair management.

A Disruptive System for Safeguarding Digital Assets

We provide ultra-secure self custody solutions, along with the most advanced technological tools for managing your own crypto funds, interact with the blockchain, obtain full insurance coverage and guarantee your cryptocurrency inheritance.

The DigitalVault Technology is Enabling ultra-secure custody of Digital Assets assets for the financial crypto industry.

Nobody ,including us , has access to your Private Keys or Crypto Funds, at any given time. Get Top Level Protection for Your Crypto Investment Now. Have total, end-to-end control over your cryptocurrency.

DigitalVault provides us with a crypto custody solution for the entire spectrum of threats , including state-sponsored attacks

With the Digital Crypto Vault, there is no third party involved at all.

DigitalVault Technology is solving urgent issues like:

Hacking of Crypto Exchanges and Wallets,

Cryptocurrency Inheritance Planning,

the Loss of Access to Bitcoin and Crypto Accounts,

Cryptocurrency Insurance,

Loss of cryptocurrency because of user's errors,

the Physical Loss of Hardware Wallets and Paper wallets,

Confiscation and Seizure of Crypto Accounts,

**Freeze and Block of Crypto Funds and many more problems
connected to Crypto account holdings.**

ABOUT US

Individuals and Financial Institutions are now able to store and invest their digital assets and crypto wealth in an ultra-secure and fully insured system, that will guarantee total control, privacy, full anonymity to the account holder while storing wealth more securely than any bank in the World.

The DigitalVault System guarantees secured lifetime access to you and the people you decide to share the account with, including heirs. Users can access their funds at any time, even years later. It doesn't matter if the DigitalCrypto Vault device is lost, stolen, seized or missing.

The DigitalVault device is an Encryption Device for Securing the storage of Crypto and requires no technical skill at all. It is Impossible to lose funds due to user error because the crypto wallet is so easy to use, which is less complicated than using an ATM machine.

This is the World's Most Secured & Anonymous Crypto Custody Technology available allowing Ultra Secured Financial Assets Transfer, Transactions and 100% Insured Crypto Banking.

There is a saying in the crypto world: if you don't hold your private key, someone else does. This has certainly been the case cryptocurrency exchanges, where millions of user funds have been stolen in recent months. And even hardware wallets where the 'wallet' company controls 'safely' the user's private keys, they too have been hacked, again with millions in crypto being stolen.

Our Crypto Custody Solutions are based on the Science of Emptiness: creating the illusion of nothingness to potential hackers.

NO Storage. Nothing To Hack.

Instead of generating and storing your private keys, like all other wallets, the DigitalVault , uses a different crypto cybersecurity concept based on the Triple Zero Standard:

Zero Trust, Zero-Knowledge & Zero Storage of keys pairs.

This means that each crypto transaction is verified without exposing any sensitive information about the users involved. The result is an ultra-secure device and that is a huge step up in crypto security.

Even if your Digital Crypto Vault Device is seized, lost, stolen, or even hacked, there is nothing that anyone can do to extract any private keys, because the crypto vault integrated within our device is functioning in the total absence of keys.

DigitalVault is the only real and fully decentralized solution: No Institution, No Physical Address, No servers, No data storage: 100% Paperless. 100% Nameless. 100% Decentralized.

Digital Crypto Vault means a Guaranteed Lifetime Account Access.

The Digital Crypto Vault is the safest and only fully insurable Cryptocurrency Custody Solution available: this is the only Safe Haven of Bitcoin and Crypto Investors for storing securely and in complete anonymity, all major cryptocurrencies.

The Digital Vault is the real solution to people seeking top-level private, secured, fully insured and ultra confidential crypto banking.

The Digital Vault is the only feasible solution to store, insure, inherit and cash Bitcoin riches.

The Digital Vault hardware and software system utilizes advanced proprietary cryptography techniques with Military-grade protection.

With the Digital Vault technology, your crypto money is safer than in any bank vault on earth. The System is not working on private keys storage, so there is no risk that someone can obtain information through forced entry.

If the DigitalVault is taken apart and forensically analyzed the private keys, public keys cannot be retrieved for one simple reason:

our patented encryption algorithms are replacing the needed keys.

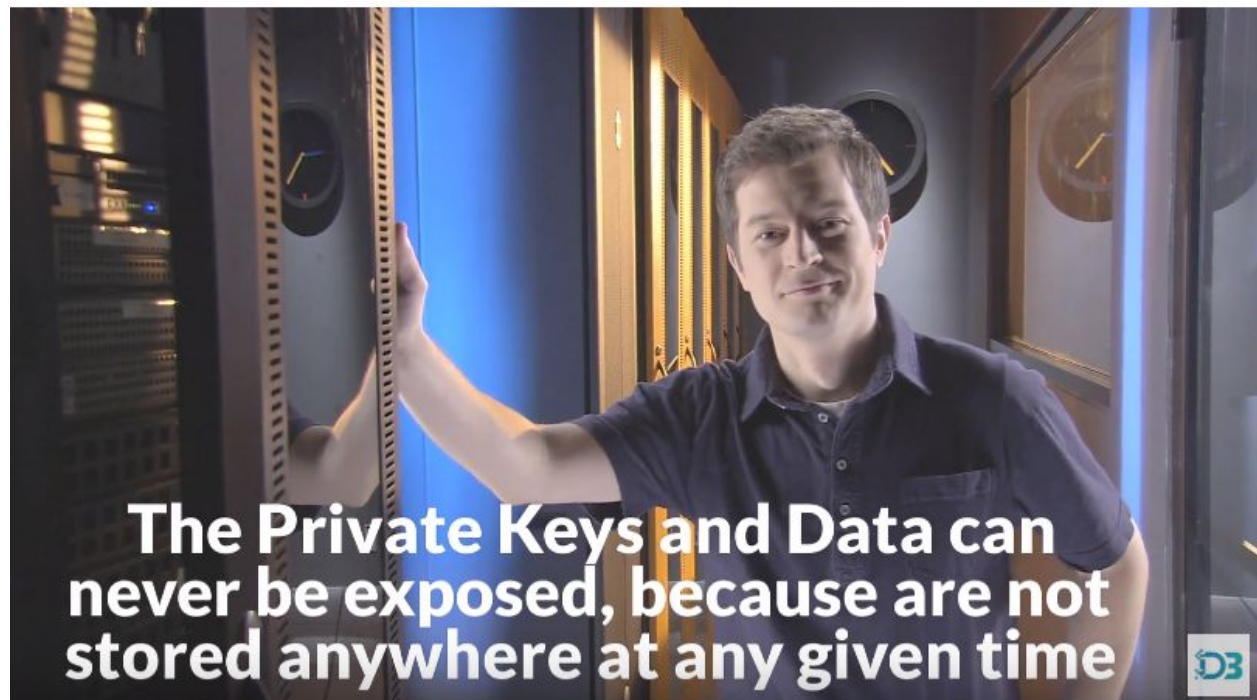

The DigitalVault system is close to unbreakable.

You are the only one that can access your crypto funds.

Remember ZERO TRUST: you do not need to trust any third party for your crypto custodial needs .DigitalVault is the only feasible solution, to be in total control of your money.The important fact is that your funds can never be tracked, blocked or frozen by anyone on earth!

The Digital Crypto Vault gives you the maximum financial privacy you deserve. Just to give you an example: No one will ever know the IP address that your transaction originated from. Our Concealed IP, means that “no one can determine the sender”.

The DigitalVault solution is ideal for Crypto Managers and Digital Assets Custodians,looking for convenience and streamlined operations with zero compromises on security.

The DigitalVault is enabling a new era in financial services and crypto solutions, safeguarding crypto assets for Banks, Hedge Funds and High Net Worth individuals. DigitalVault is providing unprecedented digital asset security to institutional investors by enabling the full insurance coverage

DigitalVault Technology brings the final solution to the public who needs to fully secure his digital assets and manage them easily on a simple interface. It brings a solution to banks that will be able to offer ultra secured cryptocurrency storage combined with Crypto management tools.

It supplies the insurance companies with a huge new potential business of ensuring cryptocurrency holdings of their clients.

The DigitalVault proposed to the banks a very attractive legal solution to enter the Cryptocurrency field, while increasing their revenues and customer base, at zero costs.

The DigitalVault is solving forever the Cryptocurrency custodianship issue to Crypto Exchanges, Crypto Investment Firms, and Cryptocurrency Inheritance Planning.

DigitalVault proprietary cryptographic algorithms permit deep cold-wallet storage, which also enables hot-wallet functionality, without keyless systems, eliminating cyber-attack vulnerabilities.

The DigitalVault is the real Fort Knox of Bitcoin Storage.

DigitalVault is the only 100% Secured & Insured Vault for the Bitcoin and Crypto Long Term Investors.

Easy and Simple Interface for operating your account: zero technical skills needed.

The DigitalCrypto Vault is an ultra-secure encryption system that supports dozens of cryptocurrencies. Its breakthrough is in the signing of transactions in a safe environment, while not managing any private keys.

This is the most secure 'crypto wallet' available and finally, brings true security to the crypto finance and investment world.

In case of loss of the device, you can buy a new one and access again your crypto funds on the Blockchains.

This is by far, the most advanced crypto banking system ever developed. This is the Most Secure Cryptocurrency Custodial System available on earth.

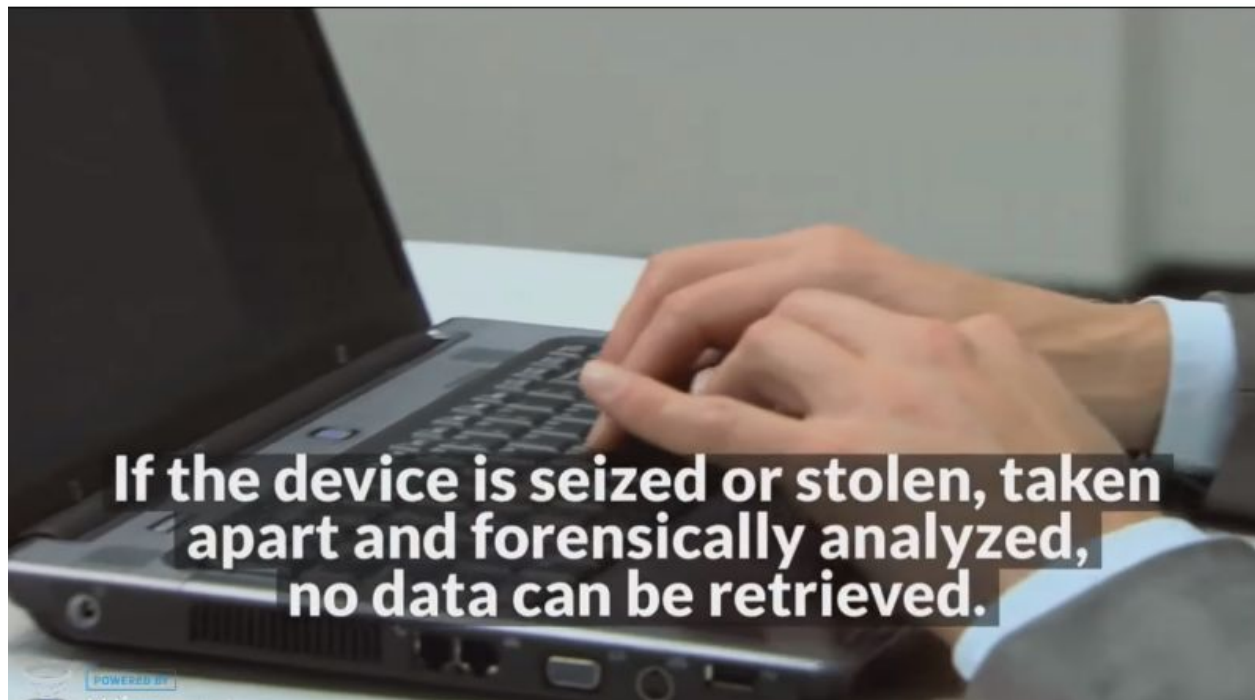

No documentation or personal details needed for Opening Crypto Accounts, 100% anonymous and totally confidential crypto accounts.

We are not involved in any type of direct crypto custody, we do not hold your private keys and we or anyone else will never know your keys.
Remember Zero Trust!

The First and Only Decentralized Anonymous Crypto Banking System in the World.

The DigitalVault is the safest vault for Bitcoin and Cryptocurrency, more secured than any cold storage option available on the markets. You can finally remain independent of third-parties to own your assets.

The DigitalVault breakthrough is in the signing of transactions without using any private keys - making the Digital Vault Account technically unbreakable and close to unhackable.

The DigitalVault Encryption Systems are not storing permanently and have no ways to store any data, files or information.

Revolutionary cybersecurity technology :

No third party involvement, No private keys,

No data stored and with a Lifetime crypto

account access guarantee.

Cryptocurrency Inheritance Planning:

For the majority of crypto investors, the last thing we think about is where our crypto will go when we die or consider cryptocurrency inheritance in our legacy planning.

However, like your traditional wealth (no matter how small that may be), it's extremely important that you take control of your digital assets and plan where they will be dispersed in the event of your death and what impact it will have on your family when it comes to bitcoin taxes and what cut the taxman will want.

Although the last thing your family is thinking about is your crypto upon your death, it will be nice for them to inherit your hard-earned assets. So, making this process as easy as possible will save them a lot of time and hassle trying to work out what are your 'private', and 'public keys' are.

Why do we say that the DigitalVault is based on a Virtually Unbreakable Encryption?

The secret is quite simple: we do not use private or public keys, anywhere, anytime. Hackers cannot extract your private keys because it is not actually residing anywhere.

All other crypto wallets solutions will generate your private key for you and will store your private key encrypted, this is the reason they are constantly hacked. Our Crypto Vault is operating in the total absence of private keys.

We do not need to store your private keys, our patented quantum-resistant encryption algorithms are replacing the use of keys

You create instantly crypto transactions using our ultra secured encryption device, keys are generated by our proprietary encryption technology, for a few milliseconds just for signing the crypto transactions and then disappear from the device, permanently.

The concept is crystal clear: the Private Key stored for a few milliseconds, for confirming the transaction is deleted in a sophisticated way, permanently from the device and from that moment the private key cannot be found anywhere, at any time.

The DigitalVault System generates crypto keys for immediate transactions in a 100% secured way, the same second they are needed for confirming transactions and they are whipped out from any memory.

At any given time, there are no third parties involved, nobody knows your private key and they are never stored on any servers or devices.

The DigitalVault is the only Crypto Custody Solution that provides a Lifetime Access Guaranteed to your Heirs.

The Security of your Crypto Funds is never, ever, compromised.

If the device is seized or stolen, taken apart and forensically analyzed no real data can be retrieved.

All DigitalVault devices provide the user, with the maximum privacy possible, that is a basic legal right of every citizen of a democratic state.
