

DigitalBank Vault Presents

The DigitalBank Vault One Time Pad Personal Offline Encryption System

www.DigitalBankVault.com

100% Offline Air Gapped Personal Encryption Systems

AN INTRODUCTION

YOU OWN PRIVATE ENCRYPTION SYSTEM THAT NOBODY ELSE HAS

Insider threats and cyberattacks are relentlessly increasing
in the age of digital transformation.

DigitalBank Vault provides government and private institutions with personal, private, impenetrable cyber defense systems for each individual within your organization, for securing data from internal and external threats.

The DigitalBank Vault One Time Pad encryption is not coming to replace your current encryption systems, our unbreakable Offline One Time Pad encryption systems are adding a complementary layer to your currently used cybersecurity technologies.

DBV transforms your most classified information into an invulnerable fortress.

The DBV One Time Pad Encryption System help you encrypt in an uncrackable way :

Any classified & sensitive information and data within your organization,
any file transfers outside the perimeter of your institution,
any form of internal and external communication (voice, video, text).

There are many levels within an organization's stack that the DBV encryption can be deployed, our Technologies allows Multi-level & Multi-Signature scenarios

Totally Immune to Online or Offline Attacks

OUR ENCRYPTION SYSTEM'S METHODOLOGY

NO INFORMATION EVER STORED

NO INTERNET CONNECTION

NO SERVERS

NO THIRD PARTIES INVOLVED

NO ENCRYPTION KEYS STORED OR EXCHANGED

Immune to any type of Digital Forensic Analysis

The DigitalBank Vault ® Encryption Technology is far beyond military-level Encryption.
DigitalBank Vault Encryption is a totally quantum-safe cryptography.

DIGITALBANK VAULT ENCRYPTION IS PROVIDING 100% CERTAINTY

The standard organization's bank-level encryption existing today in the markets is excellent for everyday common security needs but this is not enough for securing in an absolute way, highly sensitive databases, and top confidential and classified communications to be transferred in total secrecy.

Even infinite computational power and infinite time cannot break one-time pad encryption, simply because it is mathematically impossible.

Governments & Military Proof

DigitalBank Vault ® One Time Pad Offline Encryption Systems: Personal Defensive Anti Interception Cyber Technologies

The DigitalBank Vault ® Encryption is a double layer of uncrackable security to the cyber tech already in use by your organization.

WHEN YOU DON'T TRUST ANYMORE, ANYONE,
WITHIN YOUR ORGANIZATION

IT'S TIME TO USE YOUR PERSONAL UNIQUE ENCRYPTION SYSTEM

You can encrypt your sensitive files and confidential P2P communications with your own personally customized DBV Encryption System, so that in case hackers or insiders get into the databases and succeed to crack the company's encryption, they will find an unpleasant surprise:
your DBV **unique encrypted files!**

The Ultimate Cyber Defense Against Insider Threats

"It's Like Breaking into an Empty Bank Vault"

DATA THAT CANNOT BE READ IS OF NO USE TO A CYBER CRIMINAL

Your organization has now an additional tech, to block insider's threats, devastating data breaches, cyber-attacks, and communication leakages.

We cannot prevent these hacking efforts,
but we make sure that there is nothing useful to hack.

YOU CANNOT HACK WHAT ISN'T THERE!

One of the core security features being required by financial government bodies and private organizations are uncrackable encryption to secure extremely confidential file transfers and storage.

This is exactly what DigitalBank Vault is providing:

Powerful & Invulnerable data encryption to transmit restricted data or restricted information over public networks or storing databases.

Easy of Use: Personal encryption system with the end-user in mind. Our System can be used by everyone, without any special technical skills.

Limited Data Access: It doesn't matter how many system policies and security measures are in place when there's a human element involved. Instead of taking the risk and letting every employee access confidential and private data, with DigitalBank Vault, you can give access to those who need it and be sure that it is the designated person, the only one that decrypts the confidential data.

With DigitalBank Vault you can remain sure that the data received is coming from the rightful source and when sending you can guarantee that only the designated receiver is the one opening the file.

YOU CANNOT HACK WHAT YOU CANNOT REACH

The DigitalBank Vault Technology is making the data stream itself impossible to discern. All the attacker perceives is an endless flow of unrecognizable data – and data that cannot be read is of no use to the cyber-criminal.

When someone needs absolute cyber supremacy on classified data transfer and storage

When you don't trust anymore your corporate cybersecurity systems.

DigitalBank Vault ® Encryption Defensive Anti Interception Cyber Technologies

Our Encryption Hardware Devices and Software Systems are based on the DigitalBank Vault **Science of Emptiness** :

PREMIUM: 10 Unique Encryption Systems + Unlimited Cross Platforms Apps Downloads

ULTIMATE: Unlimited Unique Encryption Systems + Unlimited Cross Platforms Apps Downloads + DigitalBank Vault Laptop Encryption Device

The DigitalBank Vault ® Products

1. The DBV Personal Encryption System:

One Time Pad Keyless Encryption Tech to be installed as an application on all Android phones, Apple iPhones, Android Tablets, Ipads, Windows PC and Laptops, Mac iOS Computers

- The DigitalBank One Time Pad Encryption Technology is working on any platform, any device or system, and supporting all languages. Online & Offline.
- Customized Set of Encryption Algorithms for each individual client.
- Unbreakable Encryption of :
Text Messages and Emails, Voice Messages, Audio Messages, Video Images, Images, and Video Files, All Types of Documents and Files.
- Share the quantum-safe encrypted content on all platforms you are currently using for your online end to end encrypted communications, even apps such as Whatsapp, Telegram, Skype, Facebook Messenger, SMS, and more.
- Store securely your ultra-encrypted data on any cloud storage services such as Google Drive, Amazon, DropboxStore Uncrackable encrypted files on your devices, computers, servers.

The DBV Laptop Encryption Machine:

**Above Government/Military Level Air-Gapped
Offline Encryption System**

Laptop totally immune to online and offline attacks

- **No** Files, Documents, Video, Voice & Text Messages can be ever deciphered, read, listened to, or recorded. The DigitalBank Vault Encryption system is working totally offline, with no internet connection options, one-time pad encrypted, without any third-party server's involvement.
- DigitalBank Vault is a Bank Vault for Digital Secrets: an ultra-secure encryption technology that enables 100% privacy over communication and data storage.

Individual & Unique One Time Pad Keyless Encryption Technology that makes the stealing of information virtually impossible and guarantees the total privacy of your communication.

NO DATA CAN BE EVER EXTRACTED FROM THIS DEVICE

ABSOLUTE IMMUNITY TO SPYWARE & MALWARE OF ANY TYPE

INDIVIDUAL SET OF ENCRYPTION ALGORITHMS FOR EACH
CLIENT

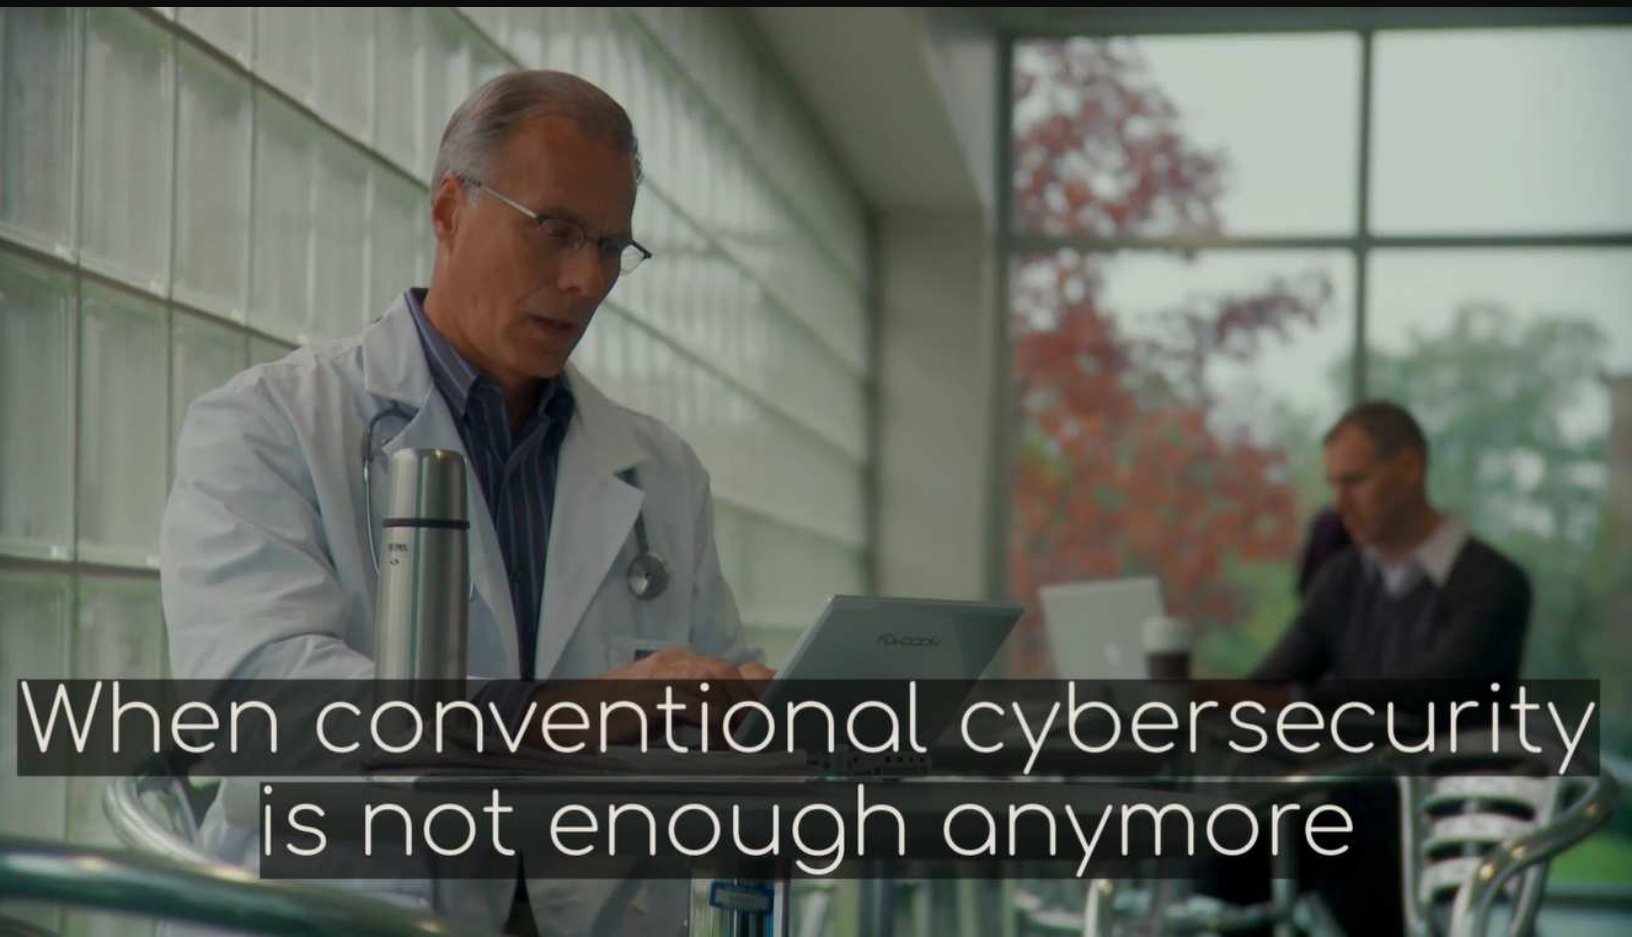

Zero Storage:

No Encryption Keys Ever Stored

No Retrievable Data of any Type

When conventional cybersecurity
is not enough anymore

Terms and Conditions

- 1 Week of Free Trial
- 24/7 Online Support & Maintenance
- Encryption Systems support all languages
- Full Online Setup, Deployment & Training
- Full Unlimited Warranty
- Subscription Packages: 90 /180/ 360 days
- Ongoing Upgrades Delivered (New features, New Devices)
- Tailored features based on customer requirements

How The DigitalBank Vault Encryption Tech Works ?

No registration needed. No dashboards. No username/passwords. No servers involved.

Our encryption system is a software-based system, downloaded to end-user devices and is not connected to any server.

Keys are created by the user himself, on the spot, when needed. The keys generated are used by a few milliseconds just to encrypt the data and then are permanently erased. The system works with all languages and is advisable to use it offline.
